

Homelessness in Hartford

Last year, Connecticut's emergency shelters served more than 11,000 people, including over 1,500 children. The number of people in shelters and transitional housing programs increased 3% from 2009 to 2010 and shelters have been operating over 100% capacity for almost two full years. Roughly one in four homeless individuals in Connecticut is sheltered in Hartford.

Homeless Persons: Connecticut and Hartford ¹

	In Connecticut		In Hartford	
	Sheltered	Unsheltered	Sheltered	Unsheltered
Total People	3,770	695	864	17
Adults Without Children	2,419	654	600	17
Adults in Families	496	17	97	0
Children in Families	800	24	167	0

Of the 4,465 total people counted during a one-day snapshot of Connecticut homelessness in 2011, twenty percent (20%) of homelessness statewide was concentrated in Hartford. Close to one-third (30%) of the people counted in Hartford were in families with children. More than two-thirds (70%) of those counted in Hartford were adults without children.

Homeless people in Hartford are relatively well-educated. Over half (58%) of adults experiencing homelessness in 2010 had a high school education or higher.² This average among adults without children and in families has remained around fifty percent (50%) over the past three years. In 2010, an additional twelve percent (12%) of homeless adults reported further education in technical, college and graduate schools.

More than four of every ten (42%) people counted in Hartford shelters on one night in January 2010 had never before been homeless.

More than one-quarter (27%) of adults in families were working at the time of their homelessness. Adults without children were somewhat less likely to have been working (19%). Both groups have experienced a decline in employment over the past three years. People who have served in the military comprised around one-tenth (11%) of the homeless population in Hartford.

Family Homelessness in Connecticut

Families headed by young, single women of color are overrepresented in family shelters across the state. Family homelessness is typically part of a longer period of economic strife and separation.

It is common for families to stay with friends and family members out of economic need. Nationally, families are more likely to enter shelter from a doubled up housing situation than from anywhere else.

In one day alone, 484 homeless families were counted in Connecticut. Eighty-nine of those families, including 170 children, were from Hartford.

Nationally and across the state, adults without children are much more likely to experience chronic homelessness than families. While over a third (37%) of adults without children in Hartford experienced chronic homelessness during *CT PIT 2010*, fifteen percent (15%) of families were found to be chronically homeless.³ More than half (55%) of all adults in families reported no disabling health issues.

Why People Are Homeless in Hartford

People who become homeless are those with the fewest resources and multiple barriers to economic and health security. In addition to inadequate income and high cost of housing as forces of homelessness, interpersonal violence, disabling health conditions, as well as re-entry and criminal justice involvement are complex contributing factors. *In Connecticut, rent problems and domestic violence were the most common reasons people had left their last place of residence.* More than one-third (38%) of adults with children in Hartford cited domestic violence as a contributing cause of homelessness while rent problems were also frequently reported by families (23%). About one-quarter (23%) of all adults without children in Hartford attributed their homelessness to a conflict with family or friends.

Shortage of Affordable Housing

In the combined Hartford-West Hartford-East Hartford metropolitan region, the Fair Market Rent (FMR)⁴ for a two-bedroom apartment is \$1,113. In order to afford this level of rent and utilities, without paying more than 30% of income on housing, a household must earn \$21.40 hourly or \$44,520 annually. A minimum wage worker earns \$8.25 hourly. In order to afford the FMR for a two-bedroom apartment, a minimum wage earner must work 104 hours per week. Or, a household must include more than two minimum wage earners in order to make the two-bedroom FMR affordable.⁵

Income Instability and Poverty

According to the U.S. Bureau of Labor Statistics, Connecticut saw an average unemployment rate of 9.1% in 2010, a rate equivalent to unemployment in the Hartford-West Hartford-East Hartford metropolitan area.⁶ The unemployment rate in this part of the state has nearly quadrupled in the past ten years, while the cost of living remains among the highest in the nation. In 2010, Connecticut was ranked the most expensive state to buy groceries, the second most expensive state in the price of utilities, the fifth most expensive state in housing expenses, and the sixth most expensive state in health care costs.⁷ Census reports show 8.4% of Connecticut's population living below the federal poverty level (FPL) in 2010. Compared to the state, Hartford residents were more than three-and-a-half times (31.6%) as likely to live below the FPL.⁸ This figure does not include those struggling to earn enough income to meet their basic needs.

Healthcare Issues

For individuals and families already struggling to pay for basic needs, a serious illness or disability can begin a cascade of lost wages, depletion of assets, and eventual eviction. About one-third (34%) of adults who were homeless in Connecticut and more than one-third (38%) of homeless adults in Hartford had been hospitalized in the past for mental health conditions. One-quarter (24%) of adults experiencing homelessness in the state reported a need for substance abuse services, and the same proportion 25% of Hartford adults reported a need for such services. Healthcare represents an important component in ending homelessness. As we look to the issues of inability to work, interpersonal violence, trauma and disability, we make the connection between appropriate and relevant mental, behavioral and physical health and housing stability.

¹ Hartford data presented are provided by the *CT PIT 2011*, a one-day snapshot of homelessness conducted on January 27, 2011. *CT PIT 2011* was conducted in shelters, housing programs, and included a street count. *CT PIT* data underestimates the extent of homelessness, as it does not capture numbers of people turned away or who do not seek shelter, or those living in doubled up and other precarious housing situations.

² From *CT PIT 2010*, a one-day snapshot of homelessness conducted on January 27, 2010. *CT PIT 2010* was conducted in shelters and housing programs only and did not include a street count.

³ "A Chronically Homeless Person or Family is an unaccompanied homeless individual with a disabling condition or a family with at least one adult member who has a disabling condition and has either been continuously homeless for a year or more OR has had at least four (4) episodes of homelessness in the past three (3) years. The term homeless in this case means a person sleeping in a place not meant for human habitation (e.g., living on the streets), in an emergency homeless shelter, or in a Safe Haven as defined by HUD." <http://www.hud.gov/offices/cpd/homeless/chronic.cfm>.

⁴ FMRs are the monthly amounts "needed to rent privately owned, decent, safe, and sanitary rental housing of a modest (non-luxury) nature with suitable amenities." Federal Register. HUD determines FMRs for localities in all 50 states.
